

## World Class Business Intelligence

Sollis has been delivering business intelligence solutions into the NHS since 1996 when our On-Line Analytical Processing (OLAP) reporting tool - SP.Hypercube™ - was launched to the market. The product has now been implemented at over sixty NHS Trusts nationwide.

We deploy this powerful analytical & reporting capability within the Microsoft Business Intelligence 'stack' which includes Microsoft SQL Server, Microsoft Office SharePoint Server and Microsoft Office. In doing so, we create business intelligence solutions that deliver business insight to managers and clinicians alike.

## The Quality & Productivity Agenda

**Our solutions help key decision-makers take better informed decisions around services that affect the quality of patient care. Today's agenda has a strong emphasis on quality and productivity with managers and clinicians needing to ensure that they are delivering improved services within a shrinking resource envelope.**

**In this environment, business intelligence becomes a necessity not a luxury.**

Business intelligence solutions need to focus on those areas where managers and clinicians can make the greatest impact. Sollis solutions do just that. We have a strong track record in delivering intelligent information in support of a number of key NHS initiatives. These include World Class Commissioning (WCC), Practice Based Commissioning (PBC), Contract & Performance Monitoring, Payment by Results (PbR), Performance Management, and various Quality & Productivity initiatives.

# Dashboards & Scorecards

Dashboards are ideal visualisation tools that enable management and clinical teams to quickly identify and then monitor performance and quality issues.

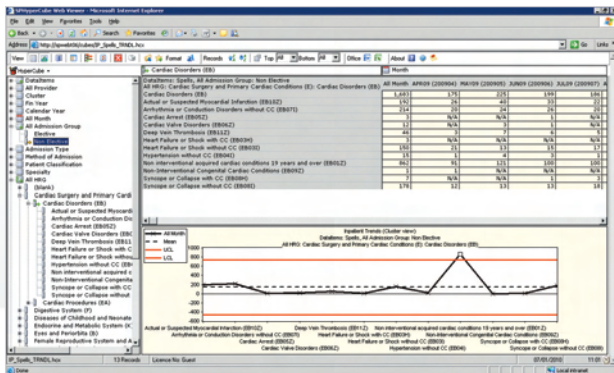

Dashboards consolidate information from a variety of sources and present it in a single, easy-to-use interface. These dashboards can be easily customised to meet the specific needs of individual managers and clinicians.

Sollis dashboards and scorecards support better decision-making by improving visibility across a wide range of management and clinical challenges that a trust faces on a daily basis.

# Query & Analysis

Sollis's business intelligence solutions incorporate SP.Hypercube functionality. Designed by Sollis, this technology delivers powerful analytical & reporting capability including statistical process control (SPC). SP.Hypercube delivers full OLAP capability which facilitates in-depth analytics and reporting on large volumes of data. Typically this data will be held in a data warehouse.

Our query and analytical tools support information specialists by allowing them to respond quickly to ad hoc reporting and information requests.

This combination of high-level, light touch dashboards and scorecards for executive teams, and sophisticated analytical tools for power users and information specialists, ensures that the right people have access to the right tools at the right time.

# Familiarity & Ease of Use

Familiarity and ease of use are fundamental to delivering a successful business intelligence solution. With this in mind we take full advantage of Microsoft business intelligence software to provide a fully integrated end-to-end solution. The key products here are Microsoft Office, Microsoft Office SharePoint Server and Microsoft SQL Server. The end product is therefore delivered through a trusted and intuitive user interface.

# Domain Knowledge

Sollis has an intimate knowledge of the healthcare domain. We work exclusively with the NHS and have many years' experience delivering solutions for a wide variety of NHS organisations.

This domain knowledge often represents the difference between the success or failure of any business intelligence project. By engaging with Sollis you can be confident that you have selected a partner who truly understands the NHS.

Sollis Business Intelligence solutions deliver business insight in support of the NHS quality and productivity agenda.
